### Required Additional Data

365 Days in a year  
12 Months in a year

1 in  $\approx$  2.5 cm  
1 qt  $\approx$  0.95 L  
1 oz  $\approx$  28 g

### Extra (student requested)

1 Kilogram  $\approx$  2.5 pounds  
Celsius  $\times 9/5 + 32 \approx$  Fahrenheit  
Fahrenheit  $- 32 \times 5/9 \approx$  Celsius

$$\frac{8 \text{ km}}{5 \text{ mi}}$$

The measurement ladders are very easy to use. Just plug in the numbers and climb or descend the ladder. When you climb the ladder, you need to divide. When you descend the ladder, you need to multiply.

### Problems in time:

48 hours is \_\_\_\_\_ days

5 hours is \_\_\_\_\_ seconds

Climb up from hours to days so you will divide by 24.

Climb down from hours to seconds so you will multiply

$$48 \div 24 = 2$$

$$5 \times 60 = 300 \text{ minutes} \times 60 = 18,000 \text{ seconds}$$
